

TradeControl

Quick installation and getting started guide

Follow these steps to import TradeControl into NinjaTrader 8, add it to a chart, and get it ready to use.

1. Open NinjaTrader and sign in

Open NinjaTrader and sign in with your NinjaTrader account.

Once you have signed in, the main NinjaTrader window will appear, with options such as New, Tools, Workspaces, Orders, and Executions.

2. Import the NinjaScript Add-On

In the main window, open the Tools menu.

Under Tools, select Import, then NinjaScript Add-On.

The import window may take a few seconds to open.

3. Select the TradeControl ZIP file

The import window works like a file browser.

Navigate to the folder where you saved the TradeControl ZIP file, select it, and click Open.

NinjaTrader will then install TradeControl automatically.

4. Restart NinjaTrader if prompted

During or after installation, NinjaTrader may indicate that you need to close and reopen the application.

If this message appears, close NinjaTrader and open it again.

5. Open a chart

Once TradeControl is installed, open the chart on which you want to use it.

6. Add TradeControl to the chart

With the chart open, you can access TradeControl in two ways:

- Right-click the chart and locate TradeControl.

- Alternatively, left-click the Drawing Tools icon at the top. In the menu that opens, scroll down to TradeControl and click it.

When you select TradeControl, the cursor changes to a pencil icon. Click the chart to open TradeControl.

7. Connect TradeControl to Chart Trader

To use TradeControl, it must be connected to Chart Trader.

Chart Trader can be visible or hidden. Once the connection is established, TradeControl can start receiving the required information and will be ready to use.

In the event of any discrepancy between this guide and the current contractual documentation, the terms of the applicable EULA shall prevail.

10. Risk warning

Trading in financial markets involves a significant risk of loss. Leveraged products can amplify both gains and losses and may result in rapid and substantial losses. Depending on the product, account type, and available protections, losses may exceed the capital initially allocated to a trade.

TradeControl is solely an auxiliary software tool. TradeControl does not execute trading orders or provide financial, investment, or trading advice, does not recommend entering into any trade, and does not guarantee results, execution prices, availability, liquidity, or limits on losses.

Before submitting any order request, the user must independently verify the instrument, direction, price, position size, risk, associated orders, and all other relevant parameters. The user is solely responsible for deciding whether a trade is appropriate for their knowledge, experience, financial circumstances, and risk tolerance.

Prices, calculations, and data displayed by the software may be subject to delays, errors, interruptions, execution price slippage, market gaps, sudden price changes, lack of liquidity, connectivity issues, or differences between displayed data and actual execution conditions. TradeControl must not be used as the sole means of controlling or limiting risk.

Do not trade with capital you cannot afford to lose. The use of simulated accounts or results obtained in simulation does not guarantee equivalent results under real market conditions.

Use of TradeControl is subject to the EULA and the current terms published at tradecontrolapp.com.
